Gameplay Instructions

Once you enter the scene, read the instrucions on the welcome menu that looks like a folder. Then choose a house to investigate. Press the Y button to open your inventory, and click on the camera. Grab the camera and look around the room for yellow fingerprints (they will also have sparkles when you see them through the camera). Once you have located a fingerprint, press Y again to open your menu and select the briefcase. Turn the dial on the briefcase clockwise until you hear a click, and now your briefcase is set to contain fingerprinting tools. Press the gold button on the right side of your briefcase to open. Locate the magnetic applicator and the bottle of magnetic latent powder. Dunk the applicator into the powder bottle, and now you have latent powder magnetized. Dust that powder onto a fingerprint surface until the fingerprint is fully visible. Take a piece of tape from the briefcase, place and remove that tape from your fingerprint surface to lift it, and finally you can place that piece of tape on the fingerprint recording card (also in the briefcase) to collect it. Remember to take images of that fingerprint along the way. Those images can be seen in your inventory or also on Nexus under the tab on the left side named Files.
