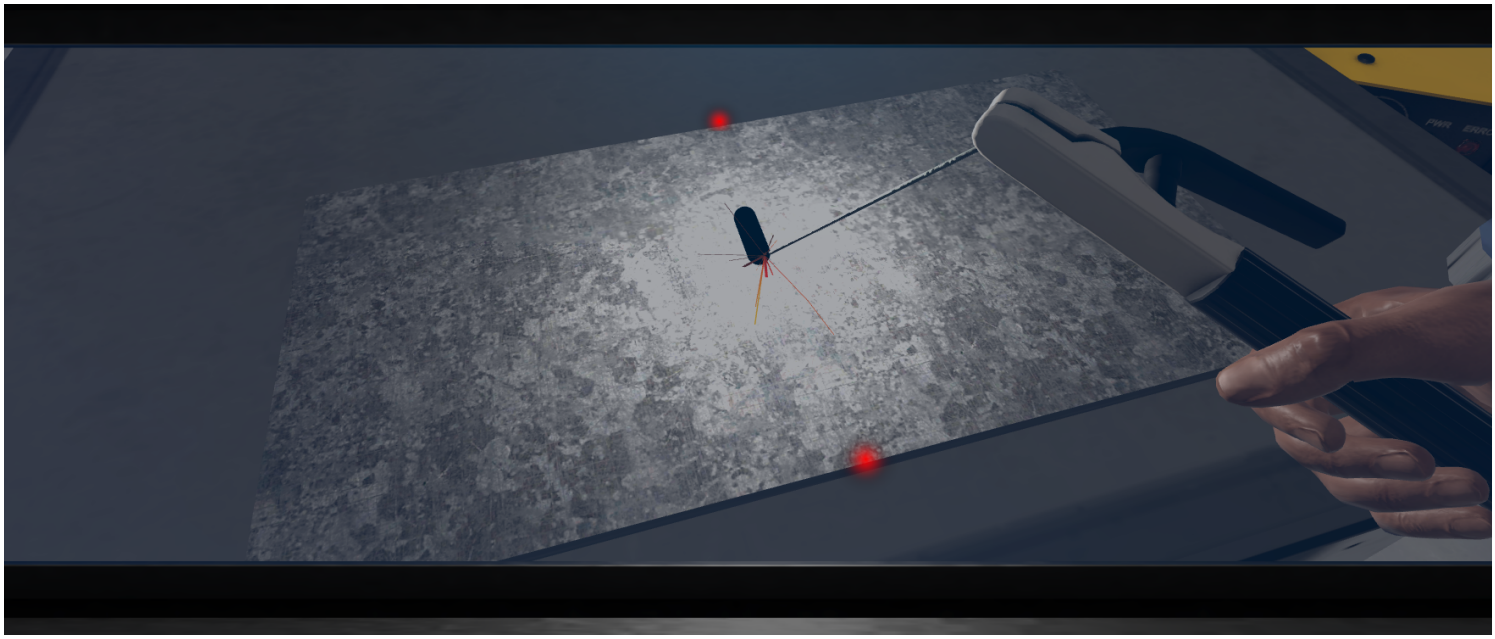
CTE: Trades

Overview:

Strap on your welding mask and jump into this exciting module introducing some of the basic skills you would need for a career as a professional welder! After putting on the proper protective gear you will have the chance to try your hand at performing a few of the most important techniques using different welding tools! Do you have the skill and steady enough hands to pass these challenges?



Gameplay Instructions

Getting Started

When you enter the training module, you will find yourself in a warehouse environment with a workbench on your left, two in front of you, and one on your right along with an instruction box floating behind the two in the middle. To start, you will dress the mannequin in the appropriate safety gear and then select your training lesson using one of the three labeled buttons on the 2nd table from the left which you will perform on the 3rd table using the tools from the 4th table. From left to right these lessons are:

1. Oxy-Fuel Cutting
2. Gas Metal Arc Welding
3. Gas Tungsten Arc Welding
