

Running VXRLabs on MacOS

After launching the app, it will attempt to verify, a popup will inform you that the app cannot be verified from an unknown developer.

Do not Eject, instead click the question mark info button, this will open the macOS User Guide, select **“Open Privacy & Security Settings for me”**, or manually navigate to your **“System Settings” > “Privacy & Security”** you can now click cancel or ok on the popup. Scroll to the bottom of privacy & security settings, a message should inform you that VXRLabs was blocked from use. Select the **“Open Anyway”** button.

This will run VXRLabs, enjoy!

Note: If a new version of VXRLabs is downloaded, you will need to do this step again. We are working to remove this inconvenience altogether and soon this process will not be needed! If you have any questions, concerns or need more assistance, please feel free to reach out to us at help@victoryxr.com
